

## DOOR CLOSER FITTING INSTRUCTIONS

**PREPARATION:** Check the door to be used is swinging and closing freely before installing the **Door Closer**.

**RECOMMENDED FITTING:** Select the inside face of the door to be used and proceed with the five steps shown.

**1** Place the **Jamb Bracket** on the hinged side of the door jamb, 25mm from the face of the door and 40mm down from the top of the door. Fasten the **Jamb Bracket** with the three **25mm screws** provided.

**2** Place the **Stop Washer** over the **Rod** and place the **Rod** onto the **Jamb Bracket**. Slip the forked **Rivet** supplied through both. **Do not** deform the legs of the **Rivet** or remove the **Spacer Tool** at this stage.

**3** Fit the **Door Plate** onto the **Closer Foot** as shown above. With the door fully closed and the latch engaged, swing the **Closer** and **Door Plate** onto the door in a level position

**4** Mark the centre of the first screw slot and drill a 3mm hole at this mark. Fasten the **Door Bracket** with one **12mm Screw**. Remove the **Closer** (jamb end first) and drill through the second screw hole. Fit the second **12mm Screw** in the **Door Bracket** and refit the **Closer**.

**5** Open the door, remove the **Spacer Tool** from the **Closer Rod**. Test the **Closer** and adjust the **Valve Screw** with **Spacer Tool** to control the closer speed. Deform the **Rivet** with the back of the **Spacer Tool**.
